Every time I change the oil, or every other 3. What is the proper Kohler oil filter part number for the Cub Cadet 1046. My 25hp Kohler holds 2 quarts of engine oil. Bob B. Like any engine, the most wear happens early. In a car, you have more wear in the first 1000 miles, than in the next 10,000 miles and it is important to remove the fine metal particles that result from the break in process. After this time, an oil change with filter at 50 hours should take you through the cutting season. Again depending on how much you have to mow. I feel the Wix filter is superior to the Kohler filter in construction and micron level. Cheap insurance in my opinion. 5 Its a good idea to fill the filter with oil until it is saturated before installing it. This is recommended in the owners manual. I would add slightly less than two quarts and let the oil settle for a few minutes before checking the dip stick. Important!! When checking the oil level, the dip stick is first wiped off, then the dip stick cap is only placed on top of the oil fill tube, NOT screwed down as you would expect. Please refer to the owners manual as it points this out. If the remainder of the oil in the second quart is needed, add as needed. 1.7 to 1.9 quarts 6 Change the oil when hot as after mowing. I use a small half gallon laundry detergent bottle to place the vinyl drain tube into when draining. Be careful after removing the yellow dust cap on the drain valve. You do not want to rotate the valve before the vinyl tube is installed or get ready for a real mess and or burn from the hot oil.

The vinyl tube has a nice smooth curve that will bend into the laundry detergent bottle nicely. Make sure you push and turn the valve counter clockwise to open it. Again be sure the vinyl tube is installed before you rotate the drain valve. Then once a year or every 50hrs. Whichever comes first. Any quality off the shelf 10w30 will do fine. Im not sure about the oil filter size or orientation on the kohler courage, but there are a bunch of oversized longer filters that will fit the kohler command engines. I wouldnt bother trying to prefill the new filter unless it mounts openend up. It might save you some aggravation. I learned a valuable lesson The directions say to pop the drain cover. No problem. They then say to attach the provided hose and push in on the drain plug while turning counterclockwise. Again no problem. But then. It says pull outward to release the oil. What they fail to mention is that if you pull out with more than just a very slight tug, itll pop off completely and you will experience the joy of watching your oil pour out on your barn floor. Do NOT pull too hard on the

oil drain. Hope my experience helps you to avoid the cleanup I just went through. My daughter 20 and I her mom changed tractor oil for the first time today. Our black top driveway is saturated with oil after the plastic port, when slightly pulled out, pulled out all the way. Why couldnt the oil drainage spout be directed downward so gravity could do its thing and go directly into a oil pan. I dont know, it just seems kind of intuitive, ya know If you can fit a 5202, by all means, do so. Filter and fluid at 50 hours, or every year. I use Shell Rotella in my OPE. Its an inexpensive quality oil. Most wear in an engine occurs immediately after an oil change. This is counter intuitive, but supported by much data.
