## Book Descriptions:

# Bsa sweet 17 scope manual

The BSA Sweet 17 is an adjustable scope made specifically for .17 caliber rimfire rifles. This scope is equipped with a focus and windage adjustable range turret accurate at distances of up to 250 yards. Items you will need Target Look through the scope at the target; center the crosshairs on the bullseye. Adjust the rear focus knob left or right until the target comes into focus. The focus knob is located just behind the eyepiece. Turn the range turret knob to your specific distance. If your target is at 50 yards, line up the base hashmark with the 50 yard hash mark on the turret. Fire a group of shots at your target. Note the shot placement in relation to the bullseye. Adjust the elevation knob located at the front of the scope on the objective bell up or down. The adjustment is dependent upon the direction your shot needs to move. If your shot is above the target, adjust the elevation up by one click. Adjust the windage knob located on the right side of the scope. If your shot is to the left or right of the bullseye, adjust the windage knob in the direction the shot needs to move. Adjust one click at a time until your shot lands on target. Warnings Never attempt maintenance on a loaded firearm. Never point a weapon at anything that you do not intend to shoot or kill. Tips Set up your target at a range that you typically shoot at. If you normally hunt or practice at 150 yards, sight in the scope at this range for optimal performance. Create one here. I shoot 15 Jan 2012 12 Apr 2014 Let me start by saying i have 3 bsa scopes on 3 of my guns and these are the i purchased a sweet 17 scope and sighted it in according to the instructions. I saved a picture BSA rifle scope I have a BSA sweet 17 rifle scope. This scope is equipped with a focus and windage adjustable range turret came with a BSA Sweet 17 3X12X40 scope on it used, so no scope manual. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. JMN 3.0 out of 5 stars The scope in no way is worth the price. Wish I had believed the negative reviews and I really question the positive reviews. Still not sure on how to adjust and reviewed the instructions and YouTube. I just turned the turrets but a buddy of mine said I was wrong. It is sited in and super accurate, and since it is a .17 cal the bullet drop is minimal to a longer distance. I was hesitant to get a cheaper end scope but I really don't have any complaints about this scope. The image is nice and clear and easily focuses on targets even with leaves or twigs in sight. No problems with accuracy and I like that it has a multi grain turret. I'm glad I got this and saved a little dough. At 100 yards I can put 30 shots through the size of a dime. And having distance rather than just click lines makes a big deal to me when a known distance just dial it in and it's ready to go. Two problems right out of the box, one definitely fatal, another nearly so. Potentially a good idea, but fatally flawed execution. Eyepiece cover was OK, but the cover over the objective lens, which should be fingertight only, is screwed in so tightly that it can't be removed, even with two strap wrenches. I'm not about to put any other kind of wrench on it for fear of distorting or torquing the tube or marring the finish.

I'll give BSA customer support a phone call in the morning for ideas but, lacking a miracle, it's going back to Amazon tomorrow, to be replaced with a Nikon. Shame, since the specs for this scope on the 17 HMR are so promising. It's almost a two-hand job, N.G. for adjusting in the field on an animal. There is what appears to be an adjusting screw on this ring, but loosening or tightening it has no apparent effect. Not suitable for hunting. Very disappointing to have these flaws even before the scope gets mounted. I'll update the review if there is a reason to do so. I'm returning it to Amazon instead, and have decided to get a replacement rather than a refund. The lens caps at least came off on this one. Optics are clear and reasonably bright. The parallax adjustment works well. The magnification ring is stiff, like the first one. It holds a zero pretty well, but the Sweet 17 features, where you dial a range with the turret based on bullet weight, is not useably repeatable, so I don't use it. I'm upping my opinion to a 3. I was able to scope it in, in about an hour. It makes me such a great marksman. I put it on a Benjamin Black Lightning break action pellet rifle. It is so accurate. I purchased this scope because it is supposed to hold up under the intense action of the break action pellet rifle. I have used CenterPoint and Gamo scopes and they lasted about 3 months before they

broke down. For the money it is an excellent scope. That being said if you set them. Returned it for a different brand. Sorry, we failed to record your vote. Please try again. Please try again. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Donald LeRoy Welty 5.0 out of 5 stars Calibrated for 17 and 20 grain. 17 hmr bullets with a window under the elevation turret that is easy to read and use. Windage and elevation turrets reset to zero and have firm sounding and feeling clicks. I typically only shoot this small of a caliber around 100 yards max but I can hit a nickel every time I pull the trigger with this scope mounted on a ruger precision. Great buy for the money. This is my 2nd sweet 17 and I'd buy another one today if I bought another 17 hmr. So this was a first. Mounted easily, laser bore sighted it. Took it to the range and put a target at 50yds. I was very high and right. Couple of turns later, I was dead center, grouping several shots within a dime sized spot. I moved the target to 100yds and I was off a bit, had to adjust the parallax to 100yds. I got pretty tight grouping, but not as tight as 50yds. I had to make some adjustments, then it was grouping within a quarter size spot. Not as clear as I thought it would be at 100yd, but maybe I was expecting more. All and all it's a pretty good scope for the price. I'll take it out again and write more. The website does not work. The scopes cross sites are way off. Issue with the inside of scope sight is off center. Unable to get help or service. Don't buy!! Properly installed the scope but it was shooting 3 feet to the left and two feet low. Adjustments were maxed and I could not site it in. Was happy with the return process. This scope is extremely accurate on my 17 caliber Savage Rifle. I am 65 years old and my sight is not as good as it once was. Some times it is hard to see varmints 100 yards away in shadowy places, however the scope brings them in clear

and bright. I use a a bipod to help steady the rifle.

<http://directalgerie.com/images/bosch-maxx-900-instruction-manual.pdf>

Once the cross hairs are on the target it is a sure shot. The only negative I noticed is that you can not turn the power all the way to the stops at 6X or 18X. Once you hit the stops at you have to turn the nob back ever so slightly or the image will be blurred a little. Not enough of a problem to worry about. Bill. Do i just use the turret on top. I read that i have to loosen the turret screws and align it to get the elevation right. Pics would help a TON. I think the scope is great and really clear so far other than unclear instructions. Then when you have it sighted in a 100yds, loosen up the 3 set screws on the turret and adjust till the 100yd mark is towards the rear of the scope. Tighten the set screws. After the rifle is sighted in pay special attention to elevation, you will need to loosen the set screws on the elevation drum it has the yardage markings on it. The drum should come off with little effort, but I will say that mine was stubborn to the point that I thought Id break the scope getting it off. After you get the drum off, look for a small and rather discreet dot on the turret; this represents the zero point for the drum when you put it back on. Use slow, firm pressure when putting the drum back on the turret. You will likely need to rotate it somewhat to align the teeth be mindful of the 0 yardage mark on the drum and the zero dot on the turret when doing this. After you seat the drum all the way down, tighten the set screws ONLY ONE QUARTER TURN after you feel firm pressure Ive had two of my buddies strip the threads on at least one of the set screw holes by over tightening. Youll be all set after that. One thing to note however, is what type of ammo you are using. In my experience Hornady VMax will strike higher on paper than hollow points of other brands. Just keep in mind that other types of ammo, especially different bullet types HP, SP, Ballistic Tip could have a different zero than the one you used to sight in the rifle with.

I was just unsure about the process. I couldn't believe such a different scope came with unspecific instructions. Thanks guys! BTW I'll be posting pics of my brand new 17 HMR this Thursday or Friday. Anyone know of an online site with the manual available for download? Thanks. If it is the same as the one I have, I can send you a copy of my manual. Offhand, I don't know the answer about which model. I'll look when I get home and let you know. Many thanks, Jim. It doesn't seem to be anything else to indicate a model number. The scope I have is a 312x40 with side focus. PM me your address and I will make a copy Monday at work and get it out to you. I like the one I have but wanted more mag for target shooting so now it sits in the closet collecting dust because I don't have a rifle for it yet. The manual arrived in yesterday's mail. Learn more about our ReturnIf you cannot upgrade your browser or use an alternative device to visit us, BSA Optics specifically designed these Riflescopes to be calibrated for the .17 HMR bullet, providing you a precise piece of glass that's entirely built around this caliber. An adjustable parallax from 10 to infinity allows you to fine tune your shots so that your reticle and your intended trophy target are both on the same focal plane when wielding the BSA Optics Sweet 17 312X40mm Hunting Rifle Scope. With 4 generous inches of eye relief, you can comfortably zone in on targets from afar during an all-day hunting trip. Grab the BSA Optics Sweet 17 Series 312X40 Rifle Scope today for an incredible value and fill up that freezer with delicious venison all season long. For our complete selection of products by BSA Optics on sale, please visit our BSA Optics page. For more Riflescopes, please visit our Riflescopes store section. The nonilluminated version does not have an adjustable objective, instead it has the parallax adjustment on the third turret.

The illuminated version uses that third turret to adjust the illumination, so that scope instead has the adjustable objective. The bolt handle bumping into the scope is the only downside but it's not bad enough to interfere with normal operation. Would definitely buy again if I had it to do over. Pros Affordable, great scope for the price. Good clarity, click adjustments are positive and scope returns to zero. However, the yardage compensation on the turrets must have been an engineering afterthought. I don't know. The smudge is really prevalent in the green cross hair mode. What makes me most aggravated was the quality. Looks great and it was quick and easy to sight in. The clarity is just what I expected. I don't know which color I like using best, I rotate through them frequently just for fun. I inadvertently changed my elevation adjustment. I can not find my owner's manual. What steps must I take to get my elevation back in range. I'm just looking for a manual. Have you tried contacting BSA directly. I searched for an online manual which you may have also. I didn't have any luck, but. What is moving up the point of impact relative to the. It shouldn't be a problem to mount it on your savage. I tried to wipe it off with isopropyl alcohol. It turned the. Answer questions, earn points and help others. This stress tested airgun scope is built to handle airgun recoil on airguns up to .30 caliber. Whether your target shooting or hunting, this scope will prove to be reliable and help you attain better accuracy. BSA has a great product and I've put a can of 250 pellets through my Octaine 22 cal and you can drive a nail with this scope. Pros It has optic clarity of a much more expensive scope. Very very clear. Cons Apparently it won't take springer recoil. It would make a good choice for a pcp. The scope is actually made for the 17 HMR and has elevation compensation for that round. It won't be a useful feature on any air rifle but as a scope it's still pretty good and very inexpensive. 4.

0 By Bill A. September 4, 2016 I bought one of these many years ago for a rimfire. In that capacity it worked flawlessly ignoring the turret markings since I was using it on a .22LR. I recently moved it to my Crosman 1077 because the AO is invaluable at the much shorter distances. Otherwise, the optics are clear and sharp. I can't comment on POI shift between magnifications because the 1077 isn't consistent enough over enough shots to convince me that the rifle isn't a factor. Pros Clear, bright, inexpensive Cons Inaccurate AO tick marks 1.0 By John July 12, 2016 Does not stand up to the recoil of a springer, my .177 np gun broke the reticle within 50 shots. 5.0 By Gary August 27, 2015 However it won't hold zero on a pellet gun spring or gas I don't know why Airgun Depot would have this scope come up with search if it's not for an airgun I'd return it, but it's my fault for not checking closer. It was doing great for the first 25 or 30 shots. I would recommend this scope for a firearm, but not an airgun. 4.0 By Robert USA January 19, 2015 This scope is built for a .17 caliber center fire rifle, not an air gun. It seems to be a pretty good scope, but I have less than 50 shots from my Browning underlever .177 pellet rifle with this scope mounted. The scope that came with the Browning was fine, but it was so long that it was difficult to load the rifle. I put the Browning scope on a Power Piston air rifle that came with a really poor scope and bought this scope for the Browning. It is shorter, and allows easy loading on the Browning. On the negative side, I had to run the elevation turret almost all the way up to get the pellet strike point in the black at 25 yards. So far, I have not shot it at further distance. The elevation problem may be with the scope rings or the rifle itself, and not the scope. My only reason for not giving this scope a five star rating is that it is not made for air guns. Purchasing it from an air gun company, I was expecting a dedicatedly made product. 5.

[AYHANCEVIK.COM/images\\_upload/files/casio-edifice-efa--118d-user-manual.pdf](http://AYHANCEVIK.COM/images_upload/files/casio-edifice-efa--118d-user-manual.pdf)

0 By Edward USA January 12, 2015 I originally put this scope on a Silent Cat, and later switched it over to my Benjamin NP2. Can't say anything bad about it, in fact it's a very nice scope if you ask me. I really like the capless turrets. Hate those caps. I've had this scope for a year or so and had to go back and look to see how much I paid for it. I think I actually paid more for mine than they are selling for now. Oh well, it's only about ten bucks, and I've well already gotten my money's worth, with what looks like may be an investment that yields good service for a long, long time. Pros Seems to never lose its adjustment. 2.0 By Larry S. December 22, 2014 Scope did not hold up on my GAMO Big Cat 1400. Within a few shots of sighting in the reticle was rotating inside scope tube. Nice scope, I just wouldn't recommend for a heavy recoil GAMO. Pros Awesome clarity. Ease of adjustment Cons Heavy 5.0 By Brad H. September 12, 2014 Got a Berman 1100 and it has tore up a few scopes but so far sweet 17 scope has done a great job could hundred shots so far. I'm getting another for my gamo silent cat. Pros Great for those air rifles that reverse recoil. Cons None 4.0 By Hector USA August 30, 2014 Nice scope solid built easy sighted hold zero so far mounted on my gamo hornet. 177 so works good from 39 power clear optics prefer fixed parallax for air guns average distances for hunting 20m 40m!! For quick target acquisition I like the turret. Login to ask someone who bought this product. Login Create Account What type of reticle does it have Tom Parrish Does this scope have a mil dot retical. Safe shooting. And have fun. Hector from USA Will this scope stand up to the one pump guns. I have a Gamo Bone Collector. With harsh recoil. asked Jerry Yes I believe it will stand up to the recoil of your gun. I was using mine on a Hatsan AT44 that has a little recoil but moved it to my Crossman Phantom that has a pretty good recoil.

My Phantom was actually a lot harder than it used to be and found out it was because of a broken spring. I also had a Benjamin Trail NP and I'm sure it could handle that as well. I'm in Brazil, Sao Paulo. You can send this product to me. Payment by PayPal If not, there is sales representative I can contact. Thank you for your time and attention. Thankful H.N. asked Humberto Humberto. Sincerely.

The Airgun Depot Customer Care Team Scott from USA Will this scope perform on a Crosman Nitro Venom Dusk.177I put it on my Vantage NP and love it.I used the AccuShot 1 in high rings as the recoil loosened other rings.Robert from USA Is this scope accurate.William from USA Its accurate if you get it sighted in properly and you have solid mounts. William from USA will this scope work on my Gamo Hornet it is a spring air rifle.It is for pros I can hit dead center 50 yards with my Gamo Bone Collector,thanks to higher scope mounts I bought off [airgundepot.com](http://airgundepot.com), ps.great prices Luis from USA see for an explanation of why scopes on break barrel rifles get out of alignment. William from USA It should work with the proper mount. But on a break barrel rifle any scope is subject to getting out of alignment I'm told. AirgunDepot sells the Hornet with a scope already mounted. William from USA Will this work with the Big Cat 1250.A 2pc mount will give you some difficulty when you go to sight the scope. Its a great scope for you buck. Hope this helps. Good luck and happy plinking. Whitty Rod from USA What size flip up covers do I buy for it.For me this is perfect, as I use strictly for competition shooting, not for hunting. John from USA Will this scope hold zero on a Gamo Whisper.Loses its center it because of loose MOUNTS or if you check the screws to see if they are loose but remember once you sight in it will always be within a click of its off Is the scope suitable for this Air gun.All rights reserved. Terms of Use.

So point of aim and point of impact are always the same; it really is that simple! The Sweet 22 is also supplied with three quick change turret drums, each designed for use with the most popular weight bullets, 36, 38 and 40 grains. All Sweet scopes feature fully multicoated precision lenses, a parallax adjustable objective lens, and are waterproof, fog proof and shock proof. With a 40mm objective lens and multicoated optics, your scope is most suited for daytime lighting. It also features an etched glass crosshair reticle for easier aiming and an adjustable objective for correcting parallax from 10 yd to infinity. With a 40mm objective lens and multicoated optics, your scope is most suited for daytime lighting. The matte black aluminum housing is lightweight, durable, waterproof, and fogproof.Let us know YOUR RECENTLY VIEWED ITEMS Browsing History ON Clear History Not responsible for typographical or illustrative errors.
